Website Services Pricing.

A Costing Proposal for Good Code.

FOR MANAGEMENT REVIEW

What this document is

At the moment, every website job is quoted from scratch. This document sets out a fixed set of packages, add-ons and rates — researched against the South African market and checked against what the work costs us to deliver.

What it is, and where it sits

Good Code offers several services, and website builds are one of them. We need a clear, written-down structure for this service so it stands on its own as a defined offer — visible on our website, priced consistently, and contributing predictably to revenue. Without one, website work stays an ad-hoc line item; with one, it becomes a repeatable income stream we can grow.

It has two halves. An **internal view** — what a job costs us to deliver. And a **client-facing view** — the packages and prices that go on the website.

What it gives us

Faster quotes. A scoped enquiry becomes a quote in minutes, not days.

Known margins. Every package is checked against its cost base before it is published.

Recurring revenue. Monthly care plans add a predictable income base alongside project work.

Anyone can quote. A fixed structure means quoting is not dependent on the founders.

How the pieces fit

The framework has five layers. **This document is Layers 2 and 3** — the costing and the client-facing packages. The Financial Policy already exists at Layer 1; the remaining layers come later.

LAYER	WHAT IT IS	FOR THIS DOCUMENT
1 • Policy	The money rules	The Financial Policy Document — deposits, terms, approvals.
2 • Costing THIS DOCUMENT	The maths	What a build costs us; the margin every price must clear.
3 • Client-facing THIS DOCUMENT	The paperwork	The packages and prices — the website page itself.
4 • Process	The sequence	Enquiry → quote → 50% deposit → build → live.
5 • Review	The rhythm	Quarterly check of quoted vs. actual hours and prices vs. market.

South African market research

A basic website in South Africa is quoted anywhere from a few hundred rand to over R56,000. The figures below are drawn from published 2026 rates of established South African web design agencies and from a [2026 SME Rocket survey of 56 SA agencies](#).

What basic websites cost in South Africa (2026)

WEBSITE TYPE	TYPICAL MARKET RANGE	COMMON AVERAGE
One-page site	R1,580 – R5,000	~R3,765
3-page custom site	R6,000 – R9,000	~R8,980
5-page business site	R6,000 – R16,000	~R6,250
8-16 page business site	R7,500 – R20,000	~R14,000

Rates & recurring costs

ITEM	MARKET RANGE
Hourly — freelancer	R250–R500/hr
Hourly — agency	R750–R1,500/hr
Hosting + maintenance	R299–R499/mo
Site management	R500–R1,500/mo
POPIA compliance add-on	~R1,680

What the data shows

- **Scope drives the price** — page count and functionality, more than design. Our tiers are therefore defined by scope.
- **Three tiers is the market norm** — most agencies offer a good / better / best ladder.
- **50% deposit is standard** — the common payment structure.
- **Monthly care plans are standard** — a normal part of the offer, not an unusual add-on.

Comparable providers

Established South African agencies offering this service, with public pricing that informed the figures above.

New Perspective Design	Award-winning WordPress agency; published 2026 pricing guide	newperspectivestudio.co.za
Gridweb	Cape Town agency; transparent tiered pricing breakdown	gridweb.co.za
SME Rocket	2026 survey of 56 SA web design agencies and their rates	smerocket.co.za
Growth Pulse Media	2026 web design pricing cost guide for SA businesses	growthpulsemedia.co.za
HostAfrica	SA hosting provider; 2026 web design cost ranges	hostafrica.co.za

What this means for our pricing

There is a clear band for basic websites — roughly R4,000 to R16,000 depending on scope — with room to sit in the middle of it rather than at the floor. The packages on the next page are set within this researched range.

Sources: published 2026 pricing pages and guides from the providers listed above, and a 2026 survey of 56 SA agencies. Figures are indicative market benchmarks.

Proposed packages and pricing

Three packages, defined by scope, all within the basic-website range from the research. Prices shown as "from" — the starting point for a standard build, adjusted by add-ons. Each price has been checked against the internal cost of delivery.

Starter R3,950 from A single-page site for a new business that needs a credible presence, fast. • 1 page, custom layout • Mobile responsive • Contact form • WhatsApp + Google Maps • Basic SEO & SSL • 1 revision round • 2 weeks support	MOST POPULAR Business R7,950 from A complete small-business site — the right starting point for most clients. • Up to 5 pages, custom • Everything in Starter, plus: • Enquiry form • Basic content loading • 2 revision rounds • Handover training • 4 weeks support	Business Plus R12,950 from A larger brochure site for an established business with more to say. • Up to 8 pages, custom • Everything in Business, plus: • Blog / news section • Image & video gallery • POPIA compliance pack • 3 revision rounds • 6 weeks support
---	--	--

Add-ons — key items

ADD-ON	PRICE
Extra page	R650
Copywriting (per page)	R450
Logo design	R1,500
POPIA compliance pack	R1,200
Booking / enquiry calendar	R1,800
Extra revision round	R600
Rush fee	+40%

Hourly rate — ad-hoc work

WORK TYPE	RATE
Standard changes & edits	R450/hr
Development & integrations	R650/hr

Monthly care plans

PLAN	PRICE	CORE
Care Lite	R299/mo	Hosting, backups, security, monitoring.
Care Standard	R650/mo	Lite + 1 hr edits/mo + monthly check.
Care Pro	R1,250/mo	Standard + 3 hrs edits + priority support.

Payment terms

50% deposit to start with the signed agreement; 50% on completion before go-live. Quotes valid 30 days.

Note on price endings — why R3,950

This is **charm pricing** — prices ending in 9 trigger "left-digit bias": R3,950 reads as "three-thousand-something", R4,000 as "four-thousand-something." A landmark MIT/Chicago field study found 9-ending prices outsold both higher *and* lower round-number prices — e.g. a dress at \$39 outsold the same dress at \$34. Best practice for the B2C / small-business market we are pricing into.

What goes on the website page

The packages on page 4 are the content of the pricing page a visitor lands on from the site. These are the practical notes on how to lay it out.

Layout

- 01 Show all three tiers side by side.**
Flag Business as "Most Popular" so the eye lands on the middle option.
- 02 Use "from R..." pricing.**
Sets a clear floor and still invites an enquiry rather than ending the conversation.
- 03 Lead each tier with "who it's for".**
A one-line description of the client, not a feature dump.
- 04 Keep the feature checklist visible.**
List what each package includes, plainly.

Also on the page

- 05 State the process and timeline.**
The five steps from Layer 4, so the client knows what to expect.
- 06 Show the payment terms.**
The 50/50 deposit structure, stated plainly.
- 07 Add a short FAQ.**
What's not included, what add-ons cost, how care plans work, what happens after launch.
- 08 One call to action per tier.**
"Get a quote" — linking to the enquiry form from step one of the process.

What stays off the website

The internal view — cost rates, overhead allocation, the margin maths — stays internal. The page shows packages, add-ons, the hourly rate and care plans only.

IN SUMMARY

A fixed set of packages, priced from research and checked against cost.

This document covers the packages, the rates and how to present them on the website. The next step is leadership sign-off on the cost-rate and overhead inputs, after which the prices are final and can be published.
